Training

will use regex to select all 'mul(%d.,%d.)' where %d is some number

```
tmp <- read.table('test.txt')
```

```
## Warning in read.table("test.txt"): incomplete final line found by
## readTableHeader on 'test.txt'
```

```
tmp
```

```
##                                                                          V1
## 1 xmul(2,4)%&mul[3,7]!@^do_not_mul(5,5)+mul(32,64]then(mul(11,8)mul(8,5))
```
